

Cheat Sheet - Creating Symbolic Links

Alexander Spetko

January 18, 2016

This Cheat sheet is for the YouTube Video <https://youtu.be/1zg48s2h0I4>.

Problem: A directory can't have more than one direct parent directory.

Solution:

1. Create a neutral directory like 'vault' or any other appropriate name.
2. Change into the parent directory
3. Create the symbolic link

```
ln -s ../vault/Turkey Turkey
```

4. Repeat the steps two and three until all links to the subdirectories are created.
